EnerNOC Demand Response Network Helps Manage Peak Demand During Last Week's Heat Waves

BOSTON, July 23, 2013 (GLOBE NEWSWIRE) -- [EnerNOC, Inc.](#) (Nasdaq:ENOC), a leading provider of energy intelligence software, today announced that its customer network was widely deployed last week to reduce peak demand for electricity across twelve states and Ontario. The extreme heat wave in the northeast and mid-Atlantic regions of the U.S. in particular caused heavy demand for electricity. For example, New York State set a new record peak demand of 33,956 megawatts last Friday, July 19, surpassing the previous record of 33,939 megawatts set on August 2, 2006. Utilizing EnerNOC's DemandSMART™ software, thousands of commercial, institutional, industrial, and agricultural customers in Idaho, Illinois, Kentucky, Maryland, New Jersey, New York, Ohio, Pennsylvania, Utah, Vermont, Virginia, and West Virginia participated in 20 separate dispatches to help grid operators and utilities manage peak demand and stabilize prices.

"With record temperatures and demand for electricity increasing as the heat wave persisted, our DemandSMART software enabled us to efficiently manage a multitude of simultaneous dispatches and deliver the capacity that our grid operator and utility customers rely on," said Tim Healy, Chairman and CEO of EnerNOC. "Thousands of our customers who engage in energy management with our software and make decisions with our applications as their primary tool were actively using DemandSMART last week, monitoring weather and grid conditions, analyzing their real-time data, and managing their energy use."

EnerNOC has dispatched almost as many customer sites in 2013 as it did in all of 2012 and last week's dispatches saw greater customer engagement with DemandSMART than at any time in Company history.
