EnerNOC's Software and Solutions Provide Grid Relief During Australian Heat Wave

BOSTON, Jan. 17, 2014 (GLOBE NEWSWIRE) -- [EnerNOC, Inc.](http://www.enernoc.com) (Nasdaq:ENOC), a leading provider of energy intelligence software (EIS), today announced that it repeatedly dispatched its commercial and industrial customers' demand response resources in New South Wales, South Australia, and Victoria, Australia in response to this week's heat wave that strained the region's electric power grid and caused prices to spike. These energy users leveraged EnerNOC's DemandSMART™ software to manage participation in Australia's growing demand response market during multiple dispatches starting Monday, helping to prevent power outages and stabilize prices.

This week's conditions caused near record-breaking demand in eastern Australia; the states of Victoria and South Australia reached electricity consumption levels last seen in January 2009. Prices also spiked in the region, with the wholesale price of electricity rising for brief periods to over \$6,200 per megawatt-hour in South Australia and over \$5,900 per megawatt-hour in Victoria. Without resources such as demand response and solar generation available, these price levels would have been sustained for longer durations.

"Demand response delivered using EnerNOC's DemandSMART software continues to be an important and reliable resource in eastern Australia during this period of unrelenting heat and grid constraint, helping to keep the lights on and maintain stable prices," said Tim Healy, Chairman and CEO of EnerNOC. "We see great potential for demand response in eastern Australia, and we thank our customers for relying on EnerNOC technology to deliver much-needed capacity to the grid."
