Boston Properties Expands Deployment of EnerNOC's Energy Intelligence Software Platform

BOSTON, Sept. 3, 2014 (GLOBE NEWSWIRE) -- [EnerNOC, Inc.](#) (Nasdaq:ENOC), a leading provider of energy intelligence software (EIS), today announced that Boston Properties, a real estate investment trust and one of the largest owners, managers, and developers of commercial office properties in the United States, has expanded its deployment of EnerNOC's software to include utility bill management across its portfolio. As of June 30, 2014, Boston Properties' portfolio consisted of 180 properties, comprised primarily of Class A office space, totaling approximately 46.6 million square feet. Boston Properties has been an EnerNOC customer since 2006.

"With this deployment, we are taking an enterprise and all-inclusive approach to our energy data by unlocking invoice data and complementing it with existing real-time meter data. The platform will increase visibility through streamlined reporting and introduce efficiencies for our property operations in the processing and handling of data while supporting our overall sustainability program. This investment will underpin our entire reporting and benchmarking processes for greater responsiveness including integration with ENERGY STAR," said Jim Whalen, Senior Vice President and Chief Information Officer of Boston Properties.

This expanded deployment of EnerNOC's software will help Boston Properties improve management of the thousands of utility bills it receives each year, and provide better data to inform more accurate budget forecasts. EnerNOC first began working with Boston Properties to optimize its energy procurement, and the relationship expanded to incorporate other energy intelligence software and solutions, including demand response, analytics for facility optimization, and a dedicated energy advisor.

"Boston Properties has demonstrated strong leadership in innovative energy management for years, and this expanded deployment affirms its commitment to solutions that deliver value for tenants, management, and owners alike," said Tim Healy, Chairman and CEO of EnerNOC. "Using energy intelligence software, companies like Boston Properties can gain visibility into sustainability and other core business goals, identify bill errors, and surface other opportunities for savings that can differentiate an organization among industry peers in a meaningful way."
