New Project Management Capabilities Added to EnerNOC's Energy Intelligence Software

BOSTON, March 02, 2016 (GLOBE NEWSWIRE) -- [EnerNOC, Inc.](#) (Nasdaq:ENOC), a leading provider of energy intelligence software (EIS) and demand response solutions, today announced the general release of new project management capabilities in its industry-leading energy intelligence software platform. For businesses that struggle with tracking and prioritizing energy-related projects, EnerNOC's EIS provides a centralized system of record to empower better decision-making and achieve greater cost control, ultimately reducing operating expenses and improving profitability.

"EnerNOC's energy intelligence software with project management capabilities allows First Potomac to identify, assign, implement and track energy savings projects in one location and that translates into real financial benefits for our tenants and the company," said Justin W. Norton, Director, Engineering, First Potomac Realty Trust. "We're able to drive even greater collaboration and accountability across our organization around energy expense management."

First Potomac is a publicly-traded real estate investment trust (REIT) with aggressive sustainability and efficiency goals that manages nearly 10 million square feet of commercial space in the greater Washington, DC metro area. EnerNOC's new project management capabilities allow businesses like First Potomac to track individual projects with relevant details, including project status, project owner, and projected financial impact, creating a single system of record for all energy-related initiatives that is easily visible to every authorized user.

"Many organizations lack a single view to track and oversee energy related projects, which can waste resources, hide opportunities, and divert accountability. EnerNOC's newest project tracking capabilities alleviate these pain points and allow organizations like First Potomac to be more productive," said Micah Remley, Senior Vice President of Product at EnerNOC.
