

ENEL X ROMANIA LAUNCHES THE NEW VERSION OF JUICEPASS ELECTRIC VEHICLE CHARGING APP

- *With JuicePass or the charging card, vehicle users can now, in addition to the public stations, manage their JuiceBox station at home*
- *The new version of the app allows drivers to configure their car model for quick information about consumption, remaining range or the duration of the vehicle recharging.*

Bucharest, October 22, 2020 - Enel X Romania, a part of Enel X, the advanced energy services division of Enel Group, has launched a new version of JuicePass, the application for charging electric cars at Enel X points. The new version allows greater flexibility in the process of charging electric vehicles and simplifies the drivers' access to useful information about the consumption of their own cars.

Drivers can now connect and subscribe directly to the Enel X mobility solutions available through the app based on the user account created. For customization, the users of electric vehicles will be able to associate one or more car models and, based on the information entered, they will receive real-time data on the duration and need for recharging or on the remaining range.

Through the application, users can now purchase a digital card that works based on RFID technology and use it at stations as an alternative method to start the charging process. In addition, by simply accessing the JuicePass application, drivers can automatically pay for the charging at public stations, accept and change the price plan or the payment method (bank card) associated with the account. The history of the charging sessions and of the received invoices are available in a dedicated section.

Roughly a quarter of Romanian electric car drivers have created accounts in the JuicePass app and can access a network of almost 55,000 public charging points in 18 European countries. The app can be downloaded from [Google Play](#) or [App Store](#), and an installation guide can be accessed on the [enelx.ro](#) website.

Drivers can check the locations and status of Enel X charging points on an interactive map either on the JuicePass app, or on the website, [here](#). They can see in real time whether a charging station is available, busy or under maintenance, as well as its type (fast or ultra-fast charging), the type of the charging cable, the power, the accessibility, and the distance and route to reach it. Currently, Enel X Romania has installed over 60 public [JuicePole](#) and [JuicePump-tyoe](#) charging points in cities such as Bucharest, Timisoara, Constanta, Deva, Drobeta Turnu Severin or Focșani.

The products launched by Enel X are part of the "Juice Family" range which includes:

JuicePole: The recharging solution designed for a perfect integration in any urban context: public use, strategic mobility points or in company car parking. It can ensure the simultaneous charging of two vehicles by AC power.

JuicePump: The fast recharging solution that paves the way for electric mobility outside the cities and makes it accessible to everyone. It allows the recharging of two electric vehicles at the same time, having three standard connectors (CCS, Chademo, Type 2).

JuiceBox: Box-type station that can be installed in individual homes, being also available in a commercial version for charging fleets of vehicles.

Enel is a multinational power company and a leading integrated player in the global power, gas and renewables markets. It is the largest European utility by ordinary EBITDA, and is present in over 30 countries worldwide, producing energy with over 86 GW of installed capacity. Enel distributes electricity through a network of over 2.2 million kilometers, and with 74 million business and household end users globally, the Group has the largest customer base among its European peers. Enel's renewables arm Enel Green Power is the world's largest renewable private player, with around 46.4 GW of wind, solar, geothermal and hydropower plants installed in Europe, the Americas, Africa, Asia and Oceania.

Enel X is Enel's global business line dedicated to the development of innovative products and digital solutions in sectors where energy is showing the greatest potential for transformation: cities, homes, industries and electric mobility. The company is a global leader in the advanced energy solution sector, managing services such as demand response for more than 6 GW of total capacity at global level and 110 MW of storage capacity installed worldwide, as well as a leading player in the electric mobility sector, with around 130,000 public and private EV charging points made available around the globe. Innovation and sustainability are at the heart of Enel X's strategy since its inception, with circular economy being the perfect combination of these two elements, applied in many of Enel X products and services.

Enel Romania is a leading private investor in energy, with operations in power distribution and supply as well as renewable energy production, active on the local market since 2005. The company has 3,100 employees and around 3 million business and household end users in the country. The E-Distributie companies operate a network of around 128,000 kilometres in three key areas of the country: Muntenia Sud (including Bucharest), Banat and Dobrogea, accounting for one third of Romania's electricity distribution market, and are developing an investment programme aimed at securing a proper service for customers, improving the quality and security of the network while also complying with Enel's environmental standards.
